

Wet separator **DUSTOMAT**HYDRO

for use in grinding, brushing and polishing

The wet separators of the DUSTOMAT HYDRO series are used in work processes **with flying sparks or for the extraction of highly flammable substances**. They are suitable for single and multi-station extraction systems for metallic dusts, such as during grinding, brushing and polishing.

The **patented water separation technology** safely binds **over 98,7 %** of the extracted dusts and sparks in water, even with the smallest particle fractions of $\geq 15 \mu\text{m}$. The **downstream dry filter system (separation efficiency up to $\geq 99.995 \%$)** is therefore low-wear and thus reduces follow-up costs. The filter system can be configured individually.

Your Benefits

- » High separation efficiency thanks to multi-stage filtration (up to $\geq 99.995 \%$)
- » Highly effective water separation (separation efficiency of 98.7 % for particle size $\geq 15 \mu\text{m}$) protects downstream dry filters
- » High extraction efficiency for optimum results
- » Heating cost savings through optional recirculation operation
- » Economical water consumption by means of water level control
- » Low-noise system operation due to sound-optimised design
- » ATEX compliant
- » Easy to operate thanks to convenient touch display

ESTA Extraction Technology

ESTA extraction technology has provided comprehensive solutions for all application areas for more than 50 years. From single devices for a wide range of application purposes to complex extraction systems – we ensure a clean working environment at all times. This protects machines, benefits your employees' health and lays the groundwork for efficient and quality-oriented working.
